Manual QA Testing Checklist v2

KNOWN ISSUE — Flow 02 Style Quiz Adaptive Learning: The quiz currently shows the same randomized set of cards every session and does not adapt based on swipes. It stops after ~10 cards instead of continuing until confidence is reached. This feature needs to be built: cards should adapt in real-time based on swipe patterns, continue until one style reaches 65%+ confidence OR 2 minutes pass, and never show blanks. Manual testing for this flow should verify the full adaptive experience once the fix is implemented.

This checklist covers all items that Maestro automated tests cannot verify and require physical device testing. All 15 Maestro flows are passing as of 2026-03-25. Complete each item manually on a physical device.

Flow 01 — Splash & Auth

- [ ] Apple Sign In completes end to end (real Apple ID)
- [ ] Google Sign In completes end to end (real Google account)
- [ ] Splash animation fades in smoothly at 60fps
- [ ] ATT (App Tracking Transparency) prompt appears on first launch only

Flow 02 — Style Quiz (KNOWN ISSUE — SEE BELOW)

- [ ] Swipe right/left gestures feel natural and responsive
- [ ] Neutral tap registers correctly in the middle
- [ ] Cards shown are DIFFERENT on each session (randomized, not cached)
- [ ] After ~5 swipes, cards begin to reflect your preferences (adaptive)
- [ ] Swiping right repeatedly on coastal cards shows more coastal-style cards
- [ ] Swiping left repeatedly on a style stops showing those cards
- [ ] Quiz does NOT stop at 10 cards — continues until confidence threshold OR 2 min
- [ ] Quiz auto-completes when model is confident (one style 65%+ of swipes)
- [ ] No blank/empty cards appear at any point
- [ ] Style blend produced matches your actual swipe pattern visually

Flow 03 — Room Capture

- [ ] Live camera capture works correctly on physical device

- [ ] LiDAR scan works on LiDAR-capable device (iPhone 12 Pro+)
- [ ] Camera permission prompt appears on first visit only
- [ ] Depth map is generated correctly from a real room photo
- [ ] Corner drag handles are easy to position with finger
- [ ] Room dimensions feel accurate after calibration

Flow 04 — Render Pipeline

- [ ] FLUX render produces a realistic redesigned room (not generic output)
- [ ] All 6 loading stages are visible and transition smoothly
- [ ] Render completes within 3 minutes
- [ ] Choice screen ('View AI Render' / 'Arrange Furniture') appears after render
- [ ] Rendered room matches the uploaded photo's structure and layout

Flow 05 — Panorama Viewer

- [ ] Full immersive 360 degree sphere renders correctly on physical device GPU
- [ ] Pan gesture is smooth — dragging rotates the camera naturally
- [ ] Pinch zoom changes field of view smoothly between 40 and 90 degrees
- [ ] Momentum decay after releasing pan gesture feels natural
- [ ] Camera stays at eye level — no tilting or drift

Flow 06 — Before/After Slider

- [ ] Drag handle is easy to grab with finger (not too small)
- [ ] Slider movement is smooth and responsive with no lag
- [ ] BEFORE side shows the actual uploaded room photo
- [ ] AFTER side shows the AI rendered result correctly
- [ ] Slider returns to default position on dismiss

Flow 07 — HUD

- [ ] HUD auto-hides after exactly 3 seconds of no interaction
- [ ] Tapping screen reveals HUD with smooth fade-in animation
- [ ] All buttons are tappable comfortably with a finger

- [ ] HUD does not obscure the render image when hidden

Flow 08 — Product Panel

- [ ] Products visually match the room style blend
- [ ] Product IMAGES load correctly (not broken icons or text-only)
- [ ] Tapping a product opens affiliate link in SFSafariViewController
- [ ] Budget slider correctly filters products by price range
- [ ] Add to Cart works and updates the cart count
- [ ] CLIP-matched products are relevant to the room style (not random)

Flow 09 — Chat

- [ ] Claude API responds with intelligent, contextual design advice
- [ ] Chat references the specific room and style blend
- [ ] Keyboard dismisses correctly when tapping outside
- [ ] Chat scrolls smoothly to latest message
- [ ] Response time is acceptable (under 10 seconds)

Flow 10 — 3D Viewer

- [ ] 3D room renders without white void or black gaps on physical device
- [ ] All furniture GLB models load correctly — visible as 3D objects, not missing
- [ ] Furniture thumbnails in catalog show real product images (not text-only)
- [ ] All 43 GLB models load without errors
- [ ] Pan gesture rotates the view smoothly
- [ ] Pinch zoom changes camera distance correctly
- [ ] Tap-to-select furniture shows selection ring
- [ ] SSAO ambient occlusion visible as subtle shadows under furniture
- [ ] Performance is smooth with no visible frame drops

Flow 11 — 2D Floorplan

- [ ] 2D toggle button actually switches view to top-down floorplan
- [ ] 3D toggle switches back correctly

- [ ] Top-down floorplan matches the room dimensions
- [ ] Furniture positions in 2D match the 3D view
- [ ] Toggle between 2D and 3D is smooth with no reload

Flow 12 — Furniture Selection

- [ ] Tap to select furniture highlights it with a visible selection ring
- [ ] Drag to move furniture is smooth and stays within room bounds
- [ ] Long press to delete furniture shows confirmation
- [ ] Undo button restores the last deleted piece
- [ ] Multiple furniture pieces can be placed without performance issues

Flow 13 — Style Chips

- [ ] Tapping a style chip visibly changes the room's color and material palette
- [ ] Furniture positions are preserved when switching styles
- [ ] Style chip names use brand names only (Ocean Breeze, Zen Garden, Boho Spirit, Mid-Century, Pure Lines)
- [ ] No internal style names visible (no 'japandi', 'coastal', 'bohemian', etc.)
- [ ] Active style chip is clearly highlighted

Flow 14 — Returning User

- [ ] Dashboard loads existing rooms correctly after app restart
- [ ] Tapping a room card navigates to the correct render
- [ ] Room thumbnail shows the latest render image (not a placeholder)
- [ ] Room name and details are correct

Flow 15 — Token Economy

- [ ] Token balance decrements by 1 after a successful render
- [ ] Token shop opens and displays purchase options correctly
- [ ] Low token warning appears when balance drops below threshold
- [ ] Token balance persists correctly across app restarts
